Total Potential CBD**	18.8%	188

% = % (w/w) = Percent (Weight of Analyte / Weight of Product) N/A
* Total Cannabinoids result reflects the absolute sum of all cannabinoids detected.
** Total Potential THC/CBD is calculated using the following formulas to take into account the loss of a carboxyl group during decarboxylation step.
Total THC = THC + (THCa *(0.877)) and **Total CBD** = CBD + (CBDa*(0.877))
ND = None Detected (Defined by Dynamic Range of the method)

This document is a potency COA format that shows the upper limits of cannabinoid analysis within a compliant testing process assuming a 30 day compliance-to-harvest window. Compliance COAs are different documents and will be provided to you in order to register with your state or county regulator. Past performance is a guide to what is possible but is never a guarantee. It is the responsibility of the farmer to implement a testing process that facilitates harvest at the optimal time for cannabinoid content and compliance.
